Projects

Arkoko (Link)   Dec. 2022 - Present

React, NodeJS, Express, MongoDB, Typescript, TailwindCSS, and Vite

- ❖ Designed a data-driven analytics platform with React that optimizes game micro-decisions which saves a user's time spent doing manual calculations upwards to over 10 to 30 seconds
- ❖ Streamlined faster database retrieval queries from MongoDB through custom API endpoints and type-safe data models using Node, Express, and Mongoose
- ❖ Maintained design consistency by designing and creating reusable custom UI components
- ❖ Simplified the deployment process of a full-stack application to production through automatic deployment configurations using Git, Vercel, and Render

Snippits (Link)   Jan. 2023

React, Typescript, TailwindCSS, PrismJS, React Router, and Vite

- ❖ Developed a code snippet repository to enhance developer and programming workflows
- ❖ Leveraged PrismJS's automatic syntax highlighting to improve the overall user experience
- ❖ Optimized load times with React Router to achieve seamless navigation between web pages

AniFlux (Link)   Feb. 2023

React, Typescript, TailwindCSS, React Router, and Vite

- ❖ Built a website built upon modern design UI/UX principles that displays a multitude of anime
- ❖ Implemented unique routing parameters to dynamically display any anime from the JikanAPI
- ❖ Created multiple user functionalities including being able to search for specific anime, view the top 100 anime of all time, display currently airing anime, and select a random anime
